## **DETAILED ACTION**

### ***Rule 37 CFR 1.126***

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims appear after the initial claim 37 and from the second claim 37 to the end of the claims. The examiner has also discovered two claims labeled 43. The claims have been renumbered from 1-73. In order to formulate the restriction and because the dependencies of the claims past claim 37 are incorrect, the examiner has created two groups for what is considered distinct inventions under the adjusted numbering scheme.

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-36, drawn to a method of treating or inhibiting urinary incontinence or increased urge to urinate in a mammal, said method comprising administering to said mammal an effective amount of an active compound combination comprising at least one compound selected from group (i) and at least one compound selected from group (ii), classified in class 546, subclass 44.

- II. Claims 37-73, drawn to a composition of matter comprising as an admixture at least one compound selected from group (i) and at least one compound selected from group (ii), classified in class 424, subclass 78.13.

The inventions of the instant application are distinct from each other for the following reasons:

- a. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the process can be achieved by use of an alternative incontinence medication. Specifically, pseudoephedrine can treat incontinence.

***Group i***

The compounds of claims 1-34, 37-70 and 73 encompass many different and distinct compositions. The compositions vary distinctly in their structures and functions. Thus, an individual search is required of each individual composition. Therefore, Applicant is required to elect a specific compound, to which the elected invention will be examined on the merits as drawn to (in the event that the elected compound cannot be found, the elected structure will be opened to a reasonable core.); as well as identifying those claims to which the elected compound is drawn. This requirement is not to be

Art Unit: 1609

taken as an election of species, but rather as an election of a single invention, since each composition is assumed to be a patentably distinct invention, in the absence of evidence to the contrary.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
